DETAILED ACTION

This office action follows a response filed March 29, 2002. A revised abstract was submitted, and claims 12, 14, and 16 were amended.

Allowable Subject Matter

1. Claims 12-16 are allowed.
2. The following is an examiner's statement of reasons for allowance: The above claims are allowable over the closest prior art, U.S. Patent No. 5,270,445 to Hou.

The present invention relates to a process for preparing dye-containing polymer particles that comprises precipitation from a solution of the polymer and dye in a water-miscible organic solvent by addition of an aqueous phase. The process results in the formation of polymer particles having an average particle size within the range of 5-5000 nm (5 μ m).

U.S. Patent No. 5,270,445 to Hou teaches a process of forming a solution of a polymer in suitable organic solvent and including a pigment to be encapsulated within the polymer followed by mixing with a miscible nonsolvent to effect the precipitation of polymer encapsulated pigment particles of uniform size, controlled surface characteristics and morphology. Specifically, nylons dissolved in HCO₂H (water-miscible solvent) are precipitated in water, resulting in the formation of particles having an average particle size of 10 μ m. The reference does not disclose formation of particles within the claimed range of 5-5000 nm using this method.

Art Unit: 1713

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record but not relied upon is considered pertinent to the Applicant's disclosure. The following references relate to polymer precipitation processes using non-aqueous solvents.
